Lesson 7: Graphing. Lesson 7: Graphing. Graphing is an essential skill for both Physics 20 and 30. You MUST be able to follow all of the rules of properly drawing a graph, and also be able to do basic interpretation of graphs. When you are presented with a chart of numbers that you are going to graph, you should start by identifying which variable is the manipulated variable and which is the dependent variable.

Physics Skills – Interpreting and Drawing Graphs REGENTS PHYSICS - Mr. Cornish In laboratory investigations, you generally control one variable and measure the effect this has on another variable while you hold all other factors constant. For example, you might vary the force on a cart and measure its

Physics Skills – Interpreting Graphs

The skills to construct and interpret graphs are a form of science skills and are an important component in learning physics. The purpose of this study was to describe the ability of undergraduate physics education students to construct graphs based on practicum data and interpret them. Data obtained through respondent answer sheets, thinking-aloud recordings, and interviews.

Free fall acceleration on Earth is just a number – a number that you should memorize if you have a professional reason for learning physics. $a = -9.8 \text{ m/s}^2$. The second method uses the graph and an equation of motion. Since we're given a displacement-time graph, use the displacement-time relationship, a.k.a. the second equation of motion.

As a refresher, share our “Basics of Graphs and Charts” with your students. AP® exam readers have pointed out that students generally exhibit good graphing skills but have more difficulty interpreting a graph. Here are a few reminders for students: Slope is a measure of how the variables change with respect to each other.
