Gis-Based Approach For

Abstract. A GIS-based approach was designed to spatially estimate direct use value of ecosystem services and to map results for a case study at county scale. The approach highlights the use of GIS to collect data, perform spatial analysis, and map economic values of ecosystem services. Three key steps of spatial valuation for agricultural products, forest products, and tourism services were illustrated in the GIS-based technical framework.

GIS is an information system technology with geography at its core foundation. GIS provides technology and methods for data integration, spatial analysis, and collaboration. GIS also provides a science-based framework for organizing workflows that integrate all the factors that need to be considered for decision making.

~~GIS The Geographic Approach ESRI~~

This paper explored a GIS-based approach for quantifying and mapping economic values of carbon sink and stock of forest ecosystem. The approach highlighted use of GIS to develop database, perform spatial analysis and map economic values.

system (GIS). In general, a GIS is designed to store, process, retrieve, and display spatially referenced data. In situations where complex environmental relationships exist, it has been found that data concerning different aspects of the physical environment can be used more effectively in combination than separately.

GIS has been found to play a significant role in the domain of siting of waste disposal sites. The potential advantage of a GIS-based approach for siting arises from the fact that it not only reduces time and cost of site selection, but also provides a digital data bank for long-term monitoring of the site.

~~Estimating the Renewable Energy Potential in Africa: A GIS ...~~

A geographic information system (GIS) is a framework for gathering, managing, and analyzing data. Rooted in the science of geography, GIS integrates many types of data. It analyzes spatial location and organizes layers of information into visualizations using maps and 3D scenes.
