Method AC electric motor. In an induction motor, the electric current in the rotor needed to produce torque is obtained via electromagnetic induction from the rotating magnetic field of the stator winding. The rotor of an induction motor can be a squirrel cage rotor or wound type rotor.

Induction motors are a type of AC motor invented in the late 1800s, and they are a practical application of the science of electromagnetism. These motors consist of stators and rotors, which are the stationary and rotational motor components, respectively. The stator - the motor housing - contains
