A soft-start controller is used in three-phase AC induction motors to reduce the load on the self-starting motor and the current surge of the motor during start-up. This reduces the mechanical stress on the motor and shaft, as well as the electrodynamic stresses on the attached power cables and electrical distribution network, extending the lifespan of the system.

The 3-phase AC induction motor (ACIM) control reference design is based on V series MCUs and provides an example for 3-phase sensorless ACIM control solutions. The reference solution features field oriented vector control (FOC) of rotor speed without any need for a speed or position sensor, improving reliability and lowering final design cost.

Low voltage AC (LVAC) induction motors are the workhorse motor technology for many segments of the electric vehicle industry; providing a tough-to-beat balance of cost, performance, efficiency, reliability, mechanical simplicity, motor control simplicity and overall system cost. At Nidec Drive Systems, we combine decades of electric vehicle experience with a passion to design high performance LVAC induction motors that are cost-effective and reliable for our customer ' s application.

A method of sensored field oriented control for induction motor can be found in application note AN908 “ Using the dsPIC30F for Vector Control of an ACIM ” (see “ References ”). The sensorless control block diagram differs from the one used in sensored control by the absence of the speed measurement and by the addition of the estimator block.

AC induction motors can be used without a VFD to drive a
pump or fan, but are often installed with variable frequency
drives (VFD) in pump systems or fan systems in an effort to
improve system efficiency. Permanent magnet synchronous
motors require a drive to operate. PMSMs cannot run
