Presents a collection of papers that were presented at the International Conference on Concurrency Theory covering such topics as logic, probabilistic systems, models of computation, and Petri nets.

This book constitutes the refereed proceedings of the 9th International Conference on Theoretical Computer Science, ICTCS 2005, held at the Certosa di Pontignano, Siena, Italy, in October 2005. The 29 revised full papers presented together with an invited paper and abstracts of 2 invited talks were carefully reviewed and selected from 83 submissions. The papers address all current issues in theoretical computer science and focus especially on analysis and design of algorithms, computability, computational complexity, cryptography, formal languages and automata, foundations of programming languages and program analysis, natural computing paradigms (quantum computing, bioinformatics), program specification and verification, term rewriting, theory of logical design and layout, type theory, security, and symbolic and algebraic computation.

The book is aimed at students taking dedicated management consulting modules and work placement programmes at undergraduate and postgraduate level. It is well suited to students of business as well as scientific and creative disciplines who undertake a work-based project during the course of their academic study.

In an age of skepticism and disenchantment, people long for something that satisfies our mind's search for truth and our heart's desire for beauty and meaning. Stand Firm: Apologetics and the Brilliance of the Gospel argues that the gospel satisfies both of these needs. It is true and rational, but it is also inherently attractive and provides meaning and purpose. In short, the gospel is brilliant. It is brilliant, in one sense, because of the broad variety of evidences for its truth. But it is also brilliant given its beauty, goodness and the meaningful life it offers. The book provides up to date responses to questions about the existence of God, the reliability of the Bible, Jesus and the resurrection, and the problem of evil. It also treats unique topics such as understanding truth, knowledge and faith, the claims of alternate faiths, religious disagreement, etc. Each chapter attempts to connect these considerations with the gospel so that we may stand firm in our faith.

This is a study of Indian economic history. The economic position is sketched at the opening of the seventeenth century. The period covers the reigns of the Mughal Emperors Jahangir and Shah Jahan. Apart from chronological or dynastic consideration, this period has a unity of its own. In the region of commerce it is marked by the practical elimination of the Portuguese, the establishment of Dutch and English merchants in the country, and the first experimental phase of the newcomers' activities; while in the wider economic sphere it covers the most significant stage in the deterioration of Akbar's administrative institutions. The author has tried to arrange in such a way that, while it should be intelligible to ordinary readers, it should serve serious students as an introduction to the original literature. The book is divided into ten chapters. In the five appendices, the author has elaborated the details pertaining to the Dutch and English companies. Early Dutch Exports to Europe, Mughal Revenue Statistics, Currency, Weights and Measures and a list of Authorities. The order of the study has been determined mainly by the nature of the material which are available.

« The public sector in many countries remains a major part of the economy in terms of both employment and provision of services. But the last 15 years it has undergone a revolution in structure, performance and management thinking. Exploring public sector strategy, the latest book in the Exploring Corporate Strategy series, explores how strategic management theory and practice is applicable to public sector organisations. » (Tiré de l'endos du livre).
