Advances in Kinetics and Mechanism of Chemical Reactions ...

A key theme running through the progress in theoretical chemical kinetics is complexity. Mechanisms can have many steps, including nonequilibrated intermediates, and methods have been developed for including this. However, in many cases in liquids and disordered solids, one cannot even develop a catalog of well-defined individual steps. Thus we must study complex processes that are too complicated to be broken into a countable number of individual kinds of steps.

The kinetic inactivation models are derived based on the following assumptions:(a) uniform distribution of microorganisms and the disinfectant molecules. (b) constant pH, temperature and the concentration of the catalyst (disinfectant). (c) adequate mixing to evade liquid diffusion as a potential limiting agent in the chemical reaction . There exist four common kinetic models; (1) Chick's model, (2) Chick-Watson model, (3) Delayed Chick-Watson model, (4) Hom model.
