conservatively ignored (e.g., as in the AISC ASD Manual, 9th Edition examples). More recently, AISC examples and actual practice have tended to take advantage of this directional strength increase. The strength of a linear weld group loaded in-plane through the center of gravity is the following: $F_w = 0.60 F_{EXX} (1.0 + 0.50 \sin 1.5\theta)$ $F_w = 0.60 F_{EXX}$

Historic Steel Construction Manuals are only available to AISC members. Notes about the PDFs: The manuals are best viewed using Adobe Reader, which displays a comprehensive table of contents within the application's bookmarks pane. Each file was processed using OCR (optical character recognition) software, so the contents are fully text searchable.

Beam-Column Design per AISC 9th Edition ASD. BEAMCOL9[®] is a spreadsheet program written in MS-Excel for the purpose of analysis and code checking of steel beams and columns. Specifically, beams and columns are analyzed / code checked per the AISC 9th Edition Allowable Stress Design (ASD) Manual. Both actual and allowable stresses are computed, with the final result being a computed "stress ratio" of actual stress/allowable stress.
