Introduction to Human Evolution | The Smithsonian ...

Since about 4 million years, human evolution has been a long, long process. From early hominids to modern humans, we are in the process of evolving at this very moment. Mammals existed during the era of dinosaurs. But they kept a low profile and remained small and furry like a hamster. After the extinction of the dinosaurs, this marked the Age of Mammals.

throughout the history of life, beginning some 4.2 billion years ago down to recent evolution within *H. sapiens* during and since the Last Glacial Period.

Timeline of human evolution - Wikipedia
Human organs, much like the human heart, have changed and evolved over the history of time. The human brain is no exception to this natural phenomena. Based on Charles Darwin's idea of Natural Selection, species that had larger brains capable of complex functioning seemed to be a favorable adaptation.

Human evolution has NOT stopped as extra arteries are ...

One of the prominent ways of tracking the evolution of the human brain is through direct evidence in the form of fossils. The evolutionary history of the human brain shows primarily a gradually bigger brain relative to body size during the evolutionary path from early primates to hominids and finally to Homo sapiens. Because fossilized brain tissue is rare, a more reliable approach is to observe anatomical characteristics of the skull that offer insight into brain characteristics.

Evolution of the brain - Wikipedia

Evolution of the human brain The human brain, in all its staggering complexity, is the product of millions of years of evolution. The brain has undergone some remarkable changes through its evolution. The most primitive brains are little more than clusters of cells bunched together at the front of an organism.

whats causing certain mismatch diseases such as heart disease, type 2 diabetes and how our body responds to them.

The Story of the Human Body: Evolution, Health and Disease ...

Humans began to evolve about seven million years ago, and progressed through four stages of evolution. Research shows that the first modern humans appeared 200,000 years ago. Neanderthals were a separate species from humans. Although they had larger brain capacity and interbred with humans, they eventually died out.

The Evolution of Humans | World Civilization
The human eye, showing the iris. In 1802, philosopher William Paley called it a miracle of "design". Charles Darwin himself wrote in his *Origin of Species*, that the evolution of the eye by natural selection seemed at first glance "absurd in the highest possible degree". However, he went on that despite the difficulty in imagining it, its ...
