Finding Common Ratios. The yearly salary values described form a geometric sequence because they change by a constant factor each year. Each term of a geometric sequence increases or decreases by a constant factor called the common ratio. The sequence below is an example of a geometric sequence because each term increases by a constant factor of 6.

Test for an arithmetic sequence. To test whether a sequence is an arithmetic sequence or not, check if the difference between any two consecutive terms is constant:  $\backslash d =$   
 $\{T\}_{2}-\{T\}_{1}=\{T\}_{3}-\{T\}_{2}=\dots = \{T\}_{n}-\{T\}_{n-1}$  If this is not true, then the sequence is not an arithmetic sequence. Worked example 1: Arithmetic sequence

Arithmetic Sequences and Sums

Sequence. A Sequence is a set of things (usually numbers) that are in order.. Each number in the sequence is called a term (or sometimes "element" or "member"), read Sequences and Series for more details..

Arithmetic Sequence. In an Arithmetic Sequence the difference between one term and the next is a constant.. In other words, we just add the same value each time ...
