Bergey's Manual of Systematic Bacteriology is the main resource for determining the identity of prokaryotic organisms, emphasizing bacterial species, using every characterizing aspect. The manual was published subsequent to the Bergey's Manual of Determinative Bacteriology, though the latter is still published as a guide for identifying unknown bacteria. First published in 1923 by David Hendricks Bergey, it is used to classify bacteria based on their structural and functional attributes by ...

Bergey's manual of determinative bacteriology, 9th ed., Sci Ref QR81 .A5 1993 This is the first place you will look in order to determine which bacterium you have . You will do this by searching for shape and size of cells, arrangement of cells, stain results, presence of capsules, endospores, or flagella, and growth preferences (e.g. aerobic versus anaerobic, optimal temperature).
