Play this game to review Biology. In the woods, there are hawks and robins. They both try to occupy the same niche by competing for worms as the only source of food in that same area at that same time. The hawks outcompete the robins, and the robins are forced to leave that area. This is an example of:

Communities & Ecosystems Dynamics Review Quiz - Quizizz

1. The factors that determine the survival and growth of organisms in an ecosystem are: biotic factors, which include the whole ecological community, and abiotic factors, which are the physical, non-living factors that shape ecosystems. 2. Three community interactions are competition, predation, and symbiosis.

Ch. 4 Answer Key - Lawndale High School

Biology Ecosystems And Communities Answer In ecology, a population is a set whose members (living in a given place at a given time) are part of the same species.
