Bone

A bone is a rigid organ

that constitutes part of

Get Free Bone

the vertebrate skeleton in animals. Bones protect the various organs of the body, produce red and white blood cells, store minerals, provide structure and support for the body, and enable mobility. Bones come in a variety of shapes and sizes and have a complex internal and external structure.

Bone definition is - one of the hard parts of the skeleton of a vertebrate.
How to use bone in a sentence.

[Bone | Definition of Bone by Merriam-](#)

Get Free Bone

Webster

The hard, dense, calcified tissue that forms the skeleton of most vertebrates, consisting of a matrix made up of collagen fibers and mineral salts. There are two main types of bone structure: compact, which is solid and hard, and cancellous, which is spongy in appearance.
