Sudden Cardiac Arrest Causes, Symptoms & Survival Rate

Overview. Sudden cardiac arrest is the abrupt loss of heart function, breathing and consciousness. The condition usually results from a problem with your heart's electrical system, which disrupts your heart's pumping action and stops blood flow to your body.

Sudden cardiac arrest - Symptoms and causes - Mayo Clinic

Cardiac Arrest (The Book) Five Heart-Stopping Years as a CEO on the Feds ' Hit-List. Who polices America ' s prosecutors? And when they set their sights on an innocent CEO, can he survive a 5-year, \$25 million legal labyrinth to save his company and himself from prison? LEARN MORE.

Howard Root – Recently retired CEO of Vascular Solutions Inc.

During cardiac arrest, unconsciousness will occur rapidly once the heart stops beating, typically within 20 seconds. Deprived of the oxygen and sugars it needs to function, the brain will be unable to deliver the electrical signals needed to sustain organ function, including breathing. This can lead to a hypoxic-anoxic injury (HAI).

Brain Activity and Damage After Cardiac Arrest

Cardiac arrest is a sudden loss of blood flow resulting from the failure of the heart to pump effectively. Signs include loss of consciousness and abnormal or absent breathing. Some individuals may experience chest pain, shortness of breath, or nausea before cardiac arrest. If not treated within minutes, it typically leads to death.. The most common cause of cardiac arrest is coronary artery ...

Cardiac arrest - Wikipedia

Cardiac arrest is the sudden loss of cardiac function, when the heart abruptly stops beating. A person whose heart has stopped will lose consciousness and stop normal breathing, and their pulse and blood pressure will be absent. Unless resuscitative efforts are begun immediately, cardiac arrest leads to death within a few minutes. This is often referred to by doctors as "sudden death" or "sudden cardiac death (SCD)."
