~~Part I~~ Chapter 25 Phylogeny And Systematics

Chapter 25 Phylogeny and Systematics Lecture Outline . Overview: Investigating the Tree of Life.
Evolutionary biology is about both process and history. The processes of evolution are natural selection and other mechanisms that change the genetic composition of populations and can lead to the evolution of new species.

CHAPTER 25 PHYLOGENY AND SYSTEMATICS. Section A2 The Fossil Record and Geological Time(continued) 3. The fossil record is a substantial, but incomplete, chronicle of evolutionary history 4. Phylogeny has a biogeographical basis in continental drift 5. The history of life is punctuated by mass extinctions. 19 3. The fossil record is a substantial, but

PPT □ CHAPTER 25 PHYLOGENY AND SYSTEMATICS PowerPoint ...

Phylogeny □ Systematics □ Molecular systematics - I. Common ancestries are revealed by the fossil record, and morphological and molecular evidence. To infer phylogeny we use information from the fossil record, morphology, development and biochemistry. Fossils also reveal characteristics that may have been lost over time in some lineages. A. The Fossil Record. 1.

Phylogeny and Systematics □ Chapter 25

Chapter 25. Phylogeny & Systematics An unexpected family tree. What are the evolutionary relationships among a human, a mushroom, and a tulip? Molecular systematics has revealed that□despite appearances□animals, including humans, and fungi, such as mushrooms, are more closely related to each other than either are to plants.

Chapter 25 ~ Phylogeny & Systematics

On the grounds of such a multidisciplinary reassessment, the chapter provides an updated taxonomy of this group threatened with extinction. Traditional ecological knowledge. Phylogeny and systematics are often seen as matters for specialists, rarely involving the realm of traditional knowledge (Freeman, 1992). Yet, the diversity of vernacular names attributed to pangolins across their geographic ranges remain a remarkable evocation of their peculiar appearance and way of life.
