In chapter 6 you will learn about chemical changes that occur in processes called chemical reactions. Chemical reactions occur in nature and
in man-made events. A series of chemical reactions occurs in plants as they convert carbon dioxide and water molecules into the
carbohydrate molecules that we eat and oxygen molecules that we breathe. Chemical

Chapter 6 Equilibrium Chemistry 211 the reaction we monitor the mass of Ca^{2+} remaining in solution and the mass of CaCO_3 that precipitates, the result looks something like Figure 6.1. At the start of the reaction the mass of Ca^{2+} decreases and the mass of CaCO_3 increases. Eventually the reaction reaches a point after which there
