Microstrip Patch Antenna in CST Compact Wideband Microstrip

Patch Antenna

To reduce the size of MPAA, a compact wideband aperture coupled

microstrip patch antenna (MPA) is utilized as array element. Size

reduction of the array element is performed through incorporating

an interdigital capacitor (IDC) in the patch and a metamaterial

(MTM) unit cell close to slot in the ground plane of the antenna.

Performance enhancement of a compact wideband patch ...

To feed this antenna, microstrip line feed is used. This antenna is

Abstract In this paper, a novel wideband circularly polarized (CP) millimeter wave (mmWave) microstrip antenna is presented. The proposed antenna consists of a central patch and a microstrip line radiator. The CP radiation is achieved by loading a rectangular slot on the ground plane.

Compact Wideband Circularly Polarized Antenna with ...

In this study, a compact crescent-shaped microstrip patch antenna is proposed for super wideband (SWB) applications. The antenna consists of a rectangular, slotted partial ground plane and a crescent shape radiating patch to cover wider frequency band than the ultrawideband. The proposed antenna is fabricated on an FR4 substrate and is fed with a 50 Ω microstrip feed line. The substrate has ...

CONCLUSION A new reconfigurable compact microstrip antenna of operating frequencies in the range of 2–5GHz with return loss less than 9.54dB is presented. Two switches are integrated into the slots of the conventional rectangular patch antenna with parasitic and slots in order to enhance and control the frequency bands.

A Compact Microstrip Antenna for Ultra Wideband - MAFIADOC.COM

Abstract: As it is well known, microstrip patch antennas are commonly used, because they are compact and it is easy to achieve a unidirectional radiation pattern with circular polarization. However, the bandwidth of patch antennas is quite narrow, which limits their use in ultrawideband (UWB) applications.

A Design of Compact Ultrawideband Circularly Polarized ...

A compact microstrip antenna for ultra wideband applications B. Kasi, Lee Chia Ping, Chandan Kumar Chakrabarty In this study, a simple and compact ultra-wideband (UWB) patch antenna with rectangular slot is presented. The fabricated antenna consists of a rectangular patch tapered from a microstrip feeding structure and a truncated ground plane.

A compact microstrip antenna for ultra wideband ...

A compact single antenna providing wide band coverage is highly demanded in recent times. In this paper a compact microstrip antenna with elliptical shape patch is designed and analyzed for its radiation characteristics. The proposed antenna is excited with
