The lab system enables students to understand the basic construction of two stroke and four-stroke diesel and petrol engine. The lab also contains basic parts of an engine like carburetor, Fuel injection system, engine-cooling system. This lab enables student to perform of various experiments such: Disassembly and Assembly of Engines

A diesel engine is similar to the gasoline engine used in most cars. Both engines are internal combustion engines, meaning they burn the fuel-air mixture within the cylinders. Both are reciprocating engines, being driven by pistons moving laterally in two directions. The majority of their parts are similar.

~~Diesel Engine Fundamentals~~

The internal combustion engines group includes engines employing mixtures of combustible gases and air, known as gas engines, those using lighter liquid fuel or spirit known as petrol engines and those using heavier liquid fuels, known as oil compression ignition or diesel engines. Classification of I.C. Engines:

WORKING PRINCIPLE OF 2 STROKE DIESEL ENGINE 1. 1st Stroke – As the piston starts rising from its B.D.C. position, it closes the transfer and the exhaust port. The air which is already there in the cylinder is compressed. At the same time with the upward movement of the piston, vacuum is created in the crank case.

Adapted specially for education to enable effective laboratory testing and demonstrations, the engine includes an exhaust thermocouple, a half-coupling to link to the test bed dynamometer and all essential hoses and fittings. In addition, each engine includes a colour-coded fuel tank with self-sealing couplings.
