This equation of the form $f(x, p, q) = 0$. 11. Find the complete integral of $pq = xy$. Given $pq = xy$. It is of the form $f(x, p) = f(y, q)$. Hence $dz = p dx + q dy$. The given differential equation can be written as, Where a & b are arbitrary constant. To Find The Singular integral: Diff (1) p.w.r.to a , Which is the singular solution.

o.de. is said to be exact. This means that a function $u(x,y)$ exists such that: $du = u_x dx + u_y dy = P dx + Q dy = 0$. One solves $u_x = P$ and $u_y = Q$ to find $u(x,y)$. Then $du = 0$ gives $u(x,y) = C$, where C is a constant.

Differential Equations EXACT EQUATIONS

A first-order differential equation is defined by an equation: $dy/dx = f(x,y)$ of two variables x and y with its function $f(x,y)$ defined on a region in the xy -plane. It has only the first derivative dy/dx so that the equation is of the first order and no higher-order derivatives exist. The differential equation in first-order can also be written as;

1st order differential equations exam questions

A differential equation (de) is an equation involving a function and its derivatives. Differential equations are called partial differential equations (pde) or ordinary differential equations (ode) according to whether or not they contain partial derivatives. The order of a differential equation is the highest order derivative occurring.
