Diffusion And Osmosis Study Guide

Diffusion is the movement of molecules from an area of high concentration to low concentration due to molecular kinetic energy; that is, the endless and random movement of molecules. Osmosis is a...

Diffusion and Osmosis: Biology Lab - Study.com

What is the main difference between osmosis and diffusion

Osmosis involves water, only occurs in liquid medium, Semi permeable membrane is required, occurs only in living organisms, depends on number of molecules on each side of the membrane, movement of particles is from a weaker to a stronger
