It is made of two types which are the open system and the closed system. The open system has fresh dissolution medium pumped through the cells and then the fractions received. The fractions are usually drawn every 30 minutes. The dissolution test conducted with this apparatus should be conducted in the best sink conditions available.

Types of dissolution apparatus: According to United States Pharmacopoeia and European Pharmacopoeia most commonly four types of apparatus are used to identify the characteristics of solid dosage form.

Apparatus 1 (basket), apparatus 2 (paddle), apparatus 3 (Reciprocating cylinder) and apparatus 4 (flow through cell).

dissolution test and apparatus, types of apparatus used for ...

Consequently, the flow-through apparatus has been developed, which features a dissolution cell of low volume (often <30 ml) and a reservoir to provide fresh solvent. This is official in USP 28 as USP

100 rpm was found to yield acceptable IVIVC for the drug. The developed dissolution method would discriminate bioequivalent batches.

(PDF) Dissolution apparatus. - ResearchGate

There are seven USP-defined types of dissolution apparatus: baskets, paddles, reciprocating cylinders, flow through cells, paddle over disk types, cylinders, and reciprocating holders. Although USP 2 paddles are most widely used, most dissolution apparatus incorporate any number of each type (often all of them).

The 708-DS dissolution apparatus is a modular system designed for manual or automated dissolution testing. The instrument can be configured for use with baskets (Apparatus 1), paddles (Apparatus 2), paddle over disk assemblies (Apparatus 5), and rotating cylinders (Apparatus 6), and can accommodate vessel sizes from 100 mL to 2 L.

dissolution vessels, vessel covers, paddles (USP Apparatus 2), baskets (USP Apparatus 1), sampling probes, temperature probes, small volume kits, filter block kits, humidity-sealed dosage-drop chambers, and more.

Dissolution Tester Accessories | Dissolution Testing
Tablet Dissolution is a standardised method for measuring the rate of drug release from a dosage form and the key word here is "standardisation" because for any results to be meaningful, it is essential that all the apparatus used for the testing, produces the same sets of results given all other parameters are equal.
