The twentieth century witnessed an era of unprecedented, large-scale, anthropogenic changes to the natural environment. Understanding how environmental factors directly and indirectly affect the emergence and spread of infectious disease has assumed global importance for life on this planet. While the causal links between environmental change and disease emergence are complex, progress in understanding these links, as well as how their impacts may vary across space and time, will require transdisciplinary, transnational, collaborative research. This research may draw upon the expertise, tools, and approaches from a variety of disciplines. Such research may inform improvements in global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health. The Influence of Global Environmental Change on Infectious Disease Dynamics is the summary of a workshop hosted by the Institute of Medicine Forum on Microbial Threats in September 2013 to explore the scientific and policy implications of the impacts of global environmental change on infectious disease emergence, establishment, and spread. This report examines the observed and potential influence of environmental factors, acting both individually and in synergy, on infectious disease dynamics. The report considers a range of approaches to improve global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health in the face of ongoing global environmental change.

What is the score card for economics at the start of the new millennium? While there are many different schools of economic thought, it is the neo-classical school, with its alleged understanding and simplistic advocacy of the market, that has become equated in the public mind with economics. This book shows that virtually every aspect of conventional neo-classical economics' thinking is intellectually unsound. Steve Keen draws on an impressive array of advanced critical thinking. He constitutes a profound critique of the principle concepts, theories, and methodologies of the mainstream discipline. Keen raises grave doubts about economics' pretensions to established scientific status and its reliability as a guide to understanding the real world of economic life and its policy-making.

African Americans and Jungian Psychology: Leaving the Shadows explores the little-known racial relationship between the African diaspora and C.G. Jung's analytical psychology. In this unique book, Fanny Brewster explores the culture of Jungian psychology in America and its often-difficult relationship with race and racism. Beginning with an examination of how Jungian psychology initially failed to engage African Americans, and continuing to the modern use of the Shadow in language and imagery, Brewster creates space for a much broader discussion regarding race and racism in America. Using Jung's own words, Brewster establishes a timeline of Jungian perspectives on African Americans from the past to the present. She explores the European roots of analytical psychology and its racial biases, as well as the impact this has on contemporary society. The book also expands our understanding of the negative impact of racism in American psychology, beginning a dialogue and proposing how we might change our thinking and behaviors to create a twenty-first-century Jungian psychology that recognizes an American multicultural psyche and a positive African American culture. African Americans and Jungian Psychology: Leaving the Shadows explores the positive contributions of African culture to Jung's theories and will be essential reading for analytical psychologists, academics and students of Jungian and post-Jungian studies, African American studies, and American studies.

How do cultural complexes affect the collective psyche? Based on Jung's theory of complexes, this book offers a new perspective on the psychological nature of conflicts between groups and cultures by introducing the concept of the cultural complex. This modern version of Jung's idea offers an original view of the forces that prevent human attempts to bring a peaceful, collaborative spirit to conflict between groups. Leading analysts and academics from a range of cultural backgrounds present their own perspective on the concept, demonstrating how the effects of cultural complexes can be felt in the behaviour of disenfranchised, oppressed and traumatised groups across the world. Ultimately, a clearer understanding of the source and nature of group conflict is reached through discussion of central subjects including: * Collective trauma and cultural complexes * Exploring racism: a clinical example of a cultural complex * Cultural complexes in the history of Jung, Freud and their followers. The Cultural Complex represents a valuable contribution to analytical psychology and will undoubtedly also stimulate dialogue in the fields of sociology, political science and cultural studies.

From the inability of wealth to make us happier, to our catastrophic blindness to the credit crunch, Economyths reveals ten ways in which economics has failed us all. Forecasters predicted a prosperous year in 2008 for financial markets - in one influential survey the average prediction was for an eleven percent gain. But by the end of the year, the Standard and Poor's 500 index - a key economic barometer - was down 38 percent, and major economies were plunging into recession. Even the Queen asked - "Why did no one see it coming?" An even bigger casualty was the credibility of economics, which for decades has claimed that the economy is a rational, stable, efficient machine, governed by well-understood laws. Mathematician David Orrell traces the history of this idea from its roots in ancient Greece to the financial centres of London and New York, shows how it is mistaken, and proposes new alternatives. Economyths explains how the economy is the result of complex and unpredictable processes; how risk models go astray; why the economy is not rational or fair; why no woman has ever won the Nobel Prize for economics; why financial crashes are less Black Swans than part of the landscape; and finally, how new ideas in mathematics, psychology, and environmentalism are helping to reinvent economics.
