The theory of dynamic response of structures is presented in a manner that emphasizes physical insight into the analytical procedures. Structural dynamics theory is applied to conduct parametric studies that bring out several fundamental issues in the earthquake response and design of multistory buildings.

Designed for senior-level and graduate courses in Dynamics of Structures and Earthquake Engineering. Dynamics of Structures includes many topics encompassing the theory of structural dynamics and the application of this theory regarding earthquake analysis, response, and design of structures. No prior knowledge of structural dynamics is assumed and the manner of presentation is sufficiently detailed and integrated, to make the book suitable for self-study by students and professional engineers.
