~~Electrocardiography Of Arrhythmias~~

A narrow complex tachycardia is usually due to an arrhythmia arising in the atria or the junctional region. The exception to this rule of thumb is if there is a co-existing bundle branch block which will cause the ventricular complexes to be wider. Broad complex tachycardias usually arise from a focus below the AV node, in the ventricles.

Section I provides multiple ECG readings of the most commonly encountered simple and complex arrhythmias, and includes differential diagnoses where appropriate. These readings are presented with a minimum of theory, and are repetitively presented in multiple permutations, as they would be encountered in the ECG reading room or on the wards.
