book of software

modules that you can use

to design embedded

systems. There are some

of the most common

building blocks

of embedded systems:

keyboard scanners,

display interfaces,

timers, and JIOs. Most

of the code is written in

highly portable C.

and software is not enough. An embedded system is a dedicated computer system, designed to work for single or few specific functions often within a larger system.

Embedded Systems, therefore, are Built to function with little or no human intervention
