**Communities Planning urban spaces for sustainability**

The application of geospatial and quantitative analyses to solve complex environmental and societal problems. Designing resource-resilient and socially just environments.
urban planning policies have shifted to a sustainable focus and cities have begun to develop new strategies for improving the quality of urban ecosystems. An extremely important function of an...

The Master of Urban and Environmental Planning program is a transdisciplinary, professional degree designed to prepare students for leadership roles in planning in the public and private sectors. The curriculum includes a core of required courses, laying the foundation of knowledge of the planning field, with a diverse selection of electives.

BORDA’s holistic, sustainable urban and regional planning approaches ensure efficient, reliable and affordable water, sanitation and energy services. BORDA – SA (South Asia) is the regional unit of BORDA, working in 4 South Asian countries – India, Nepal, Bangladesh and Bhutan.

Urban development should be guided by a sustainable planning and management vision that promotes interconnected green space, a multi-modal transportation system, and mixed-use development. Diverse public and private partnerships should be used to create sustainable and livable communities that protect historic, cultural, and environmental resources.

Modern urban planning is based on a number of key principles. These include improving the living environment, involving and informing the public, balancing and integrating interests and the principles of expedient, reasonable and sustainable land use.

For achieving a successful urban planning and design, we have to emphasis on the sustainable development of well–functioning environments.
