The catexp.sql or catalog.sql script needs to be run only once on a database. The script performs the following tasks to prepare the database for export and import operations:

Original Export and Import - Oracle

To import data, you must create a configuration file which identifies the type of export (either local filesystem, or Oracle Storage Cloud Services), and the location of the export package. You can also identify the TTL type that you want to use (ABSOLUTE or RELATIVE).

Using the Export and Import Utilities - Oracle

The chapters in this section describe the Oracle Export and Import utilities: Chapter 1, "Export" This chapter describes how to use Export to write data from an Oracle database into transportable files. It discusses export guidelines, export modes, interactive and command-line methods, parameter specifications, and Export object support.

Export and Import - Oracle

Using Oracle Export and Import These tools are used to transfer data from one oracle database to another oracle database. You Export tool to export data from source database, and Import tool to load data into the target database. When you export tables from source database export tool will extracts the tables and puts it into the dump file.

Oracle Export and Import Utility

Under the settings menu in the left sidebar you will find the Import/Export UI. To create a new export job, click the " Export " button in the top right corner of the Import/Export screen. You will see a configuration drawer slide out from the right side of the page.

How to use the new Import/Export feature in Oracle...

The export/import process may use either or both the datapump utilities (expdp/impdp) and the traditional export/import (exp/imp). For more information, read Oracle Database Utilities 11g Release 1 (11.1) or Oracle Database Utilities 11g Release 2 (11.2). Attention: This document uses UNIX/Linux syntax when describing directory structures.

Export/import process for 12.0 or 12.1 using 11gR1 or...

How to export/import an Oracle Schema In this tutorial we will see how we can export and import the content of one Oracle Schema using Oracle tools called EXPDP and IMPDP. The syntax for this task is : expdp user / passwd directory = DATA_PUMP_DIR schemas = schema_name dumpfile = dump_file. dmp logfile = log_file. log

How to export/import an Oracle Schema - AODBA

After talk to mehmet sahin, we found that the following command will import into Oracle. imp user/pwd file= [Path to dmp file] /import.dmp full=y. You can export with the following command. exp user/pwd file= [Path to dmp file] /export.dmp. Both commands will also take in .exp files. share.

import - Oracle Importing/Exporting with Command Line...

Full database export import using datapump utility The datapump utility can be used for full database export import. This can be one of the database migration or database cloning method.

Full database export import using datapump utility...

You can take advantage of Oracle Data Pump to export data from the source database before you install the new Oracle Database software, and then import the data into the target upgraded database. To use Oracle Data Pump with the upgrade procedures: Export data from the current database using the Export utility shipped with the current database.
