What is the process that produces the colors seen in the flame tests? The atom starts in the ground state, we add energy to the atom with the bunsen burner. The atom absorbs the energy and electrons jump to higher discrete energy levels.

# Bookmark File

## PDF Flame Test

Electrons quickly return to ground state, emitting a discrete amount of energy as a photon of light

to the gas, heating the bunsen burner with the lighter, and placing wooden sticks inside of the elements. Then, place one of the saturated sticks into the flame.

Finally, observe the various colors that will appear based on the element that is tested.
