A device used to measure the rate of fluid movement at a given point in the pipe or tube. The flow meter is usually secured to a break in the pipe and the fluid is allowed to move through it. Types of Fluid Flow meters:  
Several methods are employed to classify flowmeters.

The industrial fluid  
flow meters are used  
to maintain efficiency  
and help understand  
profit gains and  
losses. A flow meter is  
a device used to

measure the mass or volume of a gas or liquid. Depending on the particular industry, the flow meters are referred to by many names such as flow indicator, flow gauge, flow rate sensor, liquid meter, etc.

Turbine meters are less accurate than displacement and jet meters at low flow rates, but the measuring element does not occupy or severely restrict the entire path of flow. The flow direction is generally straight through the meter, allowing for higher

flow rates and less pressure loss than displacement-type meters.
