straight-4 engine from the Ford Ten was fitted for some export markets, including North America, where imports began for model year 1948; these cars used the slightly more aerodynamic "three-hole" grille from the 1937-8 Ford Ten 7W, prefacing the 1949 E494A ...

Ford (europe) - Ford Anglia E04A (1939-1948)

The Ford Sidevalve is a side valve (flathead engine) from the British arm of the Ford Motor Company, often also referred to as the "English Sidevalve". The engine had its origins in the 1930s Ford Model Y, and were made in two sizes, 933 cc (56.9 cu in) or "8 HP", and 1,172 cc (71.5 cu in) or "10 HP". The early engines did not have a water pump as standard, instead

Ford Sidevalve engine - Wikipedia

The Mercury Eight is an automobile that was marketed by the Mercury division of Ford between 1939 and 1951. The debut model line of the Mercury division, Ford slotted the full-size Mercury Eight between the Ford Deluxe (later Custom) model lines and the Lincoln. In total, Ford assembled three generations of the Eight (before and after World War II).

The Ford flathead V8 (often called simply the Ford

File Type PDF Ford 1939 And 1940 Engine Chis Repair Manual

flathead, flathead Ford, or flatty when the context is implicit, such as in hot-rodding) is a V8 engine with a flat cylinder head designed by the Ford Motor Company and built by Ford and various licensees. During the engine's first decade of production, when overhead-valve engines were used by only a small minority of makes, it was usually ...

The standard Ford inherited the grille of the 1939 model with blackout on each side of a heavy chrome center; heavier headlight surrounds serve as another major differentiator from the 1939. 1940 was the last year of the 1937 design and its smaller V8 engine, with a straight-six engine to be reintroduced the following year.

1940 Ford Pickup Truck ~ V8 engine - AutoMall Online
Ford came out with the small V8 in 1937 to provide a more fuel efficient and less expensive option to the regular 85hp equipped cars and light commercial vehicles. These engines were obvious by their small size and the 17 Stud heads. Ford also built the 60hp

Ford of Britain - Wikipedia

In early 1939, Ford redesigned the Transit Bus as a rear-engine model, to improve performance through better weight distribution. At the same time, the redesign used a new, larger V-8 engine: a 95 hp, 239-cubic-inch model. A prototype bus was built in February 1939, and series production began in October 1939 (in the 1940 model year).

Late 1937 and newer model year vehicles had the newer and more conventional "all cast iron" blocks. 1940 was the final year for the 60hp since the new 90hp six cylinder engine would debut for 1941. The V8 Sixty was a popular engine for aftermarket applications, particularly in midget race cars in the 1950's and 60's.
