This gigantic Galapagos tortoise will leave you in awe ...

The Galápagos tortoise complex or Galápagos giant tortoise complex (*Chelonoidis nigra* and related species) are the largest living species of tortoise. Modern Galápagos tortoises can weigh up to 417 kg (919 lb). Today, giant tortoises exist on only two remote archipelagos: the Galápagos Islands about 1,000 km (620 mi) due west of mainland Ecuador; and *Aldabrachelys gigantea* of Aldabra in the ...

Galapagos Tortoise Distribution Map The shape of the carapace of some subspecies of the tortoises is said to have reminded the early Spanish explorers of a kind of saddle they called a "galápagos," and for these saddle-shaped tortoises they named the archipelago. Up to 250,000 tortoises inhabited the islands when they were discovered.

Galapagos - Florida Iguana & Tortoise Breeders

Lonesome George (Spanish: El Solitario Jorge; c. 1910 - June 24, 2012) was a male Pinta Island tortoise (*Chelonoidis abingdonii*) and the last known individual of the species. In his last years, he was known as the rarest creature in the world. George serves as an important symbol for conservation efforts in the Galápagos Islands and throughout the world.
