Generative design is a revolutionary new method of creating artwork, models, and animations from sets of rules, or algorithms. By using accessible programming languages such as Processing, artists and designers are producing extravagant, crystalline structures that can form the basis of anything from patterned textiles and typography to lighting, scientific diagrams, sculptures, films, and even fantastical buildings.

## Generative Design

A great book on generative design or creative coding. It serves well as introduction to the java-based language/library Processing, with which all examples in the book have been produced. The book features an interesting mix of different kinds of visualizations including 2D and 3D animations, Agent-based automation, particle systems, image manipulation, color, visualization of text and data.
