~~Gold Prospecting & Placer Deposits : Finding Gold Made ...~~

Sampling and assaying a placer gold deposit to determine its economic viability is subject to many pitfalls. Once placer gold is discovered, the gold pan is usually replaced by sluices or mechanical devices to wash greater volumes of material. Discovery of placer gold has often resulted in discovery of hardrock gold deposits when the placers are traced to their sources.

~~Gold prospecting - Wikipedia~~

The first and most important step in mining placer gold is to find the deposit. If you find a placer gold deposit with considerable amounts of gold worth mining, then you need to find out if the area is free so that you can stake a claim or if someone already owns the claim so that you can lease the claim. This is important so that you don ' t run into legal problems relating to mineral trespass.

~~What is Placer Gold and How do You Find it ...~~

Prospecting for gold - a quick primer: While you can find small amounts of natural gold just about everywhere, finding concentrated gold deposits takes a little knowledge of just how gold gets around. Gold is very heavy. Actually, gold is about 19 times as heavy as water - about 3 times as heavy as iron. Knowing this makes finding it much easier.

~~Where & How To Find Gold - Gold Prospecting Advice~~

This spot is a likely location of placer gold or black sands as well. Typically when you are panning creeks for placer gold you will find old bird shot from hunters in the mix of black sands and gold. 4. Look for bedrock cracks and crevices along the stream, these are typically excellent places for gold to accumulate.

~~Prospecting Tips—BC Gold Adventures—~~

Alluvial or eluvial deposits are the most common type of placer gold, and are often the richest. They contain pieces of gold that have been washed away from the lode by the force of water, and have been deposited in sediment in or near watercourses or former watercourses. Therefore, they are mostly found in valleys or flood plains.

~~Placer mining—Wikipedia~~

The Geology of Placer Deposits A placer deposit is a concentration of a natural material that has accumulated in unconsolidated sediments of a stream bed, beach, or residual deposit. Gold derived by weathering or other process from lode deposits is likely to accumulate in placer deposits because of its weight and resistance to corrosion.
