Written by reputed industrial experts in the field, this text introduces the user to the basic properties of optical systems, aberration theory, classification and characterization of systems, advanced simulation models, measuring of system quality and manufacturing issues. In this Volume Volume 3 focuses on the treatment of aberration. By deriving and applying image quality criteria, the reader is introduced to techniques to correct his or her optical system for aberrations and to optimize ...

aberration refers to the aberration of the ray through the edge or margin of the lens aperture. It is often written as LA m or TA m. Spherical aberration is determined by tracing a paraxial ray and a trigonometric ray from the same axial object point and determining their final intercept distances l' and L' . In Fig. 3.2, l' is distance OA
