Dizziness (including vertigo) affects about 15% to over 20% of adults yearly in large population-based studies. Vestibular vertigo accounts for about a quarter of dizziness complaints and has a 12-month prevalence of 5% and an annual incidence of 1.4%. Its prevalence rises with age and is about two to three times higher in women than in men.

## **The epidemiology of dizziness and vertigo**

What causes vertigo. Inner ear problems, which affect balance, are the most common causes: benign paroxysmal positional vertigo (BPPV) - where specific head movements cause vertigo. labyrinthitis - an inner ear infection caused by a cold or flu virus. vestibular neuronitis - inflammation of the vestibular nerve.
