Das Handbuch informiert anhand von 60 Schlüsselbegriffen über die Grundlagen, Konzepte und Anwendungsbereiche der Gesundheitspsychologie und der Medizinischen Psychologie. Zunächst werden physiologische, verhaltensbezogene und psychologische Grundlagen beider Fächer dargestellt. Danach geht es um Einflussfaktoren auf Gesundheit und Krankheit, beispielsweise um verschiedene Protektiv- und Vulnerabilitätsfaktoren. Der dritte Teil des Handbuches bezieht sich auf Ansätze der Gesundheitsförderung und Prävention bei verschiedenen Schutz- und Risikoverhaltensweisen, z.B. Stressbewältigung, Alkoholkonsum und Sexualverhalten, sowie in verschiedenen Lebensaltern und gesellschaftlichen Kontexte wie Familie, Schule und Organisationen. Aspekte der psychologischen Diagnostik, Behandlung und Rehabilitation bei verschiedenen körperlichen Erkrankungen, z.B. Tumorerkrankungen und AIDS, werden im vierten Teil des Buches beschrieben. Abschließend werden komplexe Themengebiete und Arbeitsfelder der Medizinischen und Gesundheitspsychologie, u.a. Migration, Reproduktionsmedizin und Transplantation, dargestellt. Besonderer Wert wurde darauf gelegt, die ausgewählten Schlüsselbegriffe für die verschiedenen Berufsgruppen aus der Gesundheitsversorgung verständlich aufzubereiten.

This volume presents a state-of-the-science review of the most promising current European research -- and its historic roots of research -- on complex problem solving (CPS) in Europe. It is an attempt to close the knowledge gap among American scholars regarding the European approach to understanding CPS. Although most of the American researchers are well aware of the fact that CPS has been a very active research area in Europe for quite some time, they do not know any specifics about even the most important research. Part of the reason for this lack of knowledge is undoubtedly the fact that European researchers -- for the most part -- have been rather reluctant to publish their work in English-language journals. The book concentrates on European research because the basic approach European scholars have taken to studying CPS is very different from one taken by North American researchers. Traditionally, American scholars have been studying CPS in "natural" domains -- physics, reading, writing, and chess playing -- concentrating primarily on exploring novice-expert differences and the acquisition of a complex skill. European scholars, in contrast, have been primarily concerned with problem solving behavior in artificially generated, mostly computerized, complex systems. While the American approach has the advantage of high external validity, the European approach has the advantage of system variables that can be systematically manipulated to reveal the effects of system parameters on CPS behavior. The two approaches are thus best viewed as complementing each other. This volume contains contributions from four European countries -- Sweden, Switzerland, Great Britain, and Germany. As such, it accurately represents the bulk of empirical research on CPS which has been conducted in Europe. An international cooperation started two years ago with the goal of bringing the European research on complex problem solving to the awareness of American scholars. A direct result of that effort, the contributions to this book are both informative and comprehensive.

The PAS-ADD clinical interview has been designed to meet the particular problems of assessment in people with intellectual disability (mental retardation), but is equally valid for use with the general population. It provides full diagnoses under both ICD 10 and DSM IV(TR), and also

provides a framework for producing a wider case formulation using other assessment frameworks, behavioural, ecological, psychodynamic etc. The interview is designed to maximise the possibility of conducting a clinical interview, even if the client's level of language is poor. Questions are also provided for informants, so that the interviews can be conducted with a client and informant, or just with an informant if the client is non-verbal. Information can be collected, not just on current mental state, but also on a second representative episode. The interview provides full diagnoses under both ICD 10 and DSM IV(TR), including: ICD 10 Agoraphobia Social phobia Specific phobia Panic disorder Generalized anxiety disorder Obsessive compulsive disorder Depressive episode Depressive episode with psychotic features Manic episode Manic episode with psychotic features Schizophrenia Other non-organic psychosis Other persistent delusional disorder Delusional disorder Psychosis unspecified Autistic Spectrum Disorder* *Screening only DSM IV (TR) Agoraphobia Social phobia Specific phobia Panic disorder Generalized anxiety disorder Obsessive compulsive disorder Depressive episode Depressive episode with psychotic features Manic episode Manic episode with psychotic features Schizophrenia Schizophreniform disorder Delusional disorder Psychotic disorder NOS Brief psychotic disorder ADHD Autistic Spectrum Disorder* The PAS-ADD clinical interview uses a scoring system that is transparent to the user, making it very clear to see not just the criteria that have been fulfilled but also those that are close to fulfilment. This makes the process of clinical interpretation easier and based on clear evidence. There are two parts to the PAS-ADD Clinical Interview The handbook, which includes guidance to the user, notes on the diagnostic algorithms, and the semi-structured interview 1. The score forms, for recording the ratings, determining which diagnostic criteria have been met, and bringing together other relevant information to make a comprehensive case formulation. 2. Vital information for: psychologists, psychiatrists and qualified professionals in community mental health teams, mental health trusts, acute health trusts, universities and students
