The general requirement for a statistical report is not as complicated as it may seem. You need to leave
1-inch margins on three sides of the page and a 1.5-inch margin on the left side in case the work is
going to be put into a binder. There is no need to double-space your work, but keep the font neutral and
readable.

We should report statistics in context to make them meaningful and ensure our audiences understand their significance, taking care to avoid giving figures more weight than can stand scrutiny.

~~Guidance: Reporting statistics — Editorial Guidelines~~

Type your report in an easy-to-read font. Statistical reports typically are typed single-spaced, using a font such as Arial or Times New Roman in 12-point size. If you have an assignment sheet that describes the formatting requirements, follow those exactly. You typically want to have 1-inch margins around all sides of your report.

~~How to Write a Statistical Report (with Pictures) — wikiHow~~

ANOVAs (both one-way and two-way) are reported like the t test, but there are two degrees-of-freedom numbers to report. First report the between-groups degrees of freedom, then report the within-groups degrees of freedom (separated by a comma). After that report the F statistic (rounded off to two decimal places) and the significance level.

~~Reporting Statistics in APA Style~~

Reporting Descriptive (Summary) Statistics. Means: Always report the mean (average value) along with a measure of variability (standard deviation(s) or standard error of the mean). Two common ways to express the mean and variability are shown below:

~~How to Write Guide: Reporting Statistics in Your Paper~~

The Process of Writing a Statistical Data Analysis Report Example A 200-word abstract is a perfect way to start many academic papers. This piece of writing contains a summary of the entire text, highlighted major points, target audience, and goals of the project.

~~How to Write a Statistical Report (with 5 Real Life ...)~~

If p is greater than .05 and F is less than 1, report the result something like this: There was no significant effect of Icon Type on task completion time ($F_{1,9} = 0.876, ns$). Statistical significance is impossible if F is less than 1; hence, the convention of reporting the probability simply as "ns" for "not significant".

~~How to Report an F-Statistic — York University~~

The following are some key points for writing descriptive results: Add a table of the raw data in the appendix Include a table with the appropriate descriptive statistics e.g. the mean, mode, median, and

search. The details of statistical reporting vary slightly among different areas of science and also among different journals. General Guidelines Rounding Numbers For numbers greater than 100, report to the nearest whole number (e.g., $M = 6254$). For numbers between 10 and 100, report to one decimal place (e.g., $M = 23.4$). For numbers be-

~~Reporting Statistics in Psychology~~

If you are reporting a list of statistics within parentheses, you do not need to use brackets within the parentheses. For example ($SD = 1.5$, $CI = -5, 5$) Use parentheses to enclose degrees of freedom. For example, $t(10) = 2.16$. Probability values: report the p-value exactly, unless it is less than .001. If less than that amount, the convention is to report it as: $p < .001$.

~~Reporting Statistics APA Style — Statistics How To~~

The F statistics will always have two numbers reported for the degrees of freedom following the format: (df regression, df error). For statistics such as R^2 and p-values where the number before the decimal point is assumed to be zero, the 0 is omitted.

~~Reporting Statistics in APA Format — Statistics Solutions~~

In a results section, your goal is to report the results of the data analyses used to test your hypotheses. To do this, you need to identify your data analysis technique, report your test statistic, and provide some interpretation of the results. Each analysis you run should be related to your hypotheses.

~~Writing up your results — APA Style guidelines~~

Values to report: R^2 , F value (F), degrees of freedom (numerator, denominator; in parentheses separated by a comma next to F), and significance level (p), ?. Report the ? and the corresponding t-test for that predictors for each predictor in the regression

~~Reporting Statistics in APA Format~~

Reporting Descriptive (Summary) Statistics Means : Always report the mean (average value) along with a measure of variability (standard deviation(s) or standard error of the mean).
