Ibc Code For Chemical Tankers | alabuamra.com

You only have to glance at Chapter 17 of the IMO's IBC Code to get a sense of the complexity of the chemical tanker segment. The chapter lists the minimum requirements for the safe carriage of almost 200 chemicals, with notes pertaining to the fire protection measures, gauging equipment, and tank vents, etc., needed in each case.

Chemical tanker inert gas compliance

Both these codes prescribe the design and construction standards of ships and the equipment they should carry, with due regard to the nature of the products involved. But the main difference between these codes lies in its applicability. The BCH code is applicable to the chemical tankers built before 1 July 1986. The IBC code is applicable to the chemical tankers built after 1 July 1986.

What is the Difference between IBC and BCH Code ? - MySeaTime

Chemical cargoes can be very dangerous, most of them being flammable and/or toxic, some of them extremely so. The IBC Code defines three ship types (ST) of chemical tankers: ST1, ST2, and ST3.-ST1 is a chemical tanker intended to transport most dangerous products, which require maximum preventive measures to preclude an escape of such cargo. Accordingly, a type 1 ship should survive the most severe standard of damage stability and its cargo tanks should be located at the maximum prescribed ...
