rise to a characteristic band near 1465 cm^{-1} in IR and Raman spectra. The rocking, wagging, and twisting appear in the region of $1422\text{--}719\text{ cm}^{-1}$.

The Handbook of Infrared and Raman Characteristic ...

The characteristic group frequencies of both IR and Raman spectroscopy are complementary and their respective strengths and weaknesses are discussed for various functional groups. Using both techniques may provide confirmation of the presence of particular functional groups or provide additional information.
