The Test of English as a Foreign Language™ (TOEFL®) is used by more universities worldwide than any other test to assess English language proficiency for academic admission and placement decisions, and to guide English language instruction. This landmark volume provides a detailed description and analysis of Educational Testing Service's research and development efforts to develop a major revision of the TOEFL® test. The result is a book that serves as a case study of test design drawing upon theory in the complex domain of English language proficiency while attempting to meet standards of educational measurement. Building a Validity Argument for the Test of English as a Foreign Language™ is distinctive in its attempt to develop a coherent story of the rationale for a test or its revision, explain the research and development process, and provide the results of the validation process. Through its treatment of one test, it expands on and tests principles and approaches to educational measurement, providing an in-depth, integrated perspective on the overall process of test revision. Moreover, because the conceptual foundation and history are presented alongside the empirical studies and validity argument, these sometimes disparate areas are presented in a way that demonstrates their connections – an approach which represents a departure from, or extension of, conventional materials on test revision. This volume is particularly relevant for professionals and graduate students in educational measurement, applied linguistics, and second language acquisition as well as anyone interested in assessment issues.

The principal aims of this study, a conceptual replication of an earlier investigation of the TOEFL[R] computer-based test, or TOEFL CBT, in Buenos Aires, Cairo, and Frankfurt, were to assess test takers' reported acceptance of the TOEFL Internet-based test, or TOEFL iBT™, and its associations with possible determinants of this acceptance and with test performance; evaluate differences in the pattern of results for test takers from different countries; and compare the findings with those for the TOEFL CBT. A questionnaire concerning attitudes about the test and other relevant variables was administered by the Internet to TOEFL iBT examinees in 4 diverse countries with large testing volumes: China, Colombia, Egypt, and Germany. Overall attitudes about the TOEFL iBT were moderately positive in most countries, but neutral in Germany; attitudes about the Listening and Writing sections of the test were uniformly favorable in every country; but attitudes about the Speaking section were consistently less favorable in all countries and were unfavorable in Germany and Colombia. Attitudes about the test had similar patterns of relationships in the 4 countries: moderate correlations with attitudes about admissions tests in general, slight and inconsistent correlations with TOEFL performance and computer anxiety, and minimal correlations with other variables. All in all, these results were very similar to those in the earlier investigation, with 1 exception: the previous study found uniformly moderate positive attitudes about the TOEFL CBT in the 3 countries surveyed. (Contains 7 tables.).

Includes proven test-taking strategies, 6 full-length practice exams, and Audio CD with listening exercises.

The implicit/ explicit distinction is central to our understanding of the nature of L2 acquisition. This book begins with an account of how this distinction applies to L2 learning, knowledge and instruction. It then reports a series of studies describing the development of a battery of tests providing relatively discrete measurements of L2 explicit/ implicit knowledge. These tests were then utilized to examine a number of key issues in SLA - the learning difficulty of different grammatical structures, the role of L2 implicit/ explicit knowledge in language proficiency, the relationship between learning experiences and learners' language knowledge profiles, the metalinguistic knowledge of teacher trainees and the effects of different types of form-focused instruction on L2 acquisition. The book concludes with a consideration of how the tests can be further developed and applied in the study of L2 acquisition.

The Test of English as a Foreign Language (TOEFL) currently has two different forms, the Paper-based TOEFL (PBT) and the Computer-based TOEFL (CBT). The CBT represents advances in information technology that have allowed test publishers to incorporate computer-adaptive testing (CAT) techniques and to employ question types that are unavailable for paper-based testing. Computerization has led to greater costs for students as well as potential for greater measurement accuracy. The purpose of this dissertation was to determine the effect of the computerization of the TOEFL on the measurement of ESL proficiency of incoming international students at The University of Mississippi (UM) by examining the correlation between the University's placement test, comprised of the Michigan Test of English Language Proficiency and the Listening Comprehension Test (MTELP/LCT), and the two different versions of the TOEFL, the CBT and the PBT.
