In stochastic modeling, conditional probabilities are rarely procured via (1.16) but instead are dictated as primary data by the circumstances of the application, and then (1.16) is applied in its equivalent multiplicative form $Pr \{A \mid B\} = Pr \{A|B\} Pr \{B\}$ (1.17) to compute other probabilities.

Introduction 1. Stochastic Modeling A quantitative description of a natural phenomenon is called a mathe-matical model of that phenomenon. Examples abound, from the simple equation $S = Zgt^2$ describing the distance S traveled in time t by a falling object starting at rest to a complex computer program that simulates a
