This title is a Pearson Global Edition. The Editorial team at Pearson has worked closely with educators around the world to include content which is especially relevant to students outside the United States. This book is ideal for one- or two-semester or two- or three-quarter courses covering topics in college algebra, finite mathematics, and calculus for students in business, economics, and the life and social sciences. *Introductory Mathematical Analysis for Business, Economics, and the Life and Social Sciences* provides a mathematical foundation for students in a variety of fields and majors. Haeussler, Paul, and Wood establish an emphasis on algebraic calculations that sets this text apart from other introductory, applied mathematics books. Because the process of calculating variables builds skills in mathematical modeling, this emphasis paves the way for students to solve real-world problems that use calculus. The book's comprehensive structure--covering college algebra in Chapters 0 through 4, finite mathematics in Chapters 5 through 9, and calculus in Chapters 10 through 17--offers instructors flexibility in how they use the material based on the course they're teaching,
