JIS Aluminium Alloy Ingots for Casting - Mtllexs.com

JIS of Aluminium Alloy Ingot for Die Casting - Mtllexs.com This standard applies to all aluminum alloys for casting standardized in JIS H 5202 and all types of aluminum alloys for casting standardized in ISO 3522 with the exception of materials for die casting. The material codes listed distinguish between the two.

This specification covers commercial aluminum alloys in ingot form for remelting and molten form for the manufacture of castings. The material shall be of uniform quality and shall be free from dross, slag, and other harmful contamination. The ingots or molten metal shall conform to the chemical composition limits specified.

Japanese Industrial Standards - Wikipedia

Aluminum Alloys industry is an important part of non-ferrous cast metal industry. Aluminum alloys encompass a combination of aluminum metal and other alloying elements. It supports maintaining the precise chemical specifications in the finished products. Aluminium foundry alloys are used for aluminium castings. Gravita's production is based on Secondary aluminium.
