This volume features new perspectives on the implications of cross-linguistic and cultural diversity for epistemology. It brings together philosophers, linguists, and scholars working on knowledge traditions to advance work in epistemology that moves beyond the Anglophone sphere. The first group of chapters provide evidence of cross-linguistic or cultural diversity relevant to epistemology and discuss its possible implications. These essays defend epistemic pluralism based on Sanskrit data as a commitment to pluralism about epistemic stances, analyze the use of two Japanese knowledge verbs in relation to knowledge how, explore the Confucian notion of justification, and surveys cultural differences about the testimonial knowledge. The second group of chapters defends "core monism"—which claims that despite the cross-linguistic diversity of knowledge verbs, there is certain core epistemological meaning shared by all languages—from both a Natural Semantic Metalanguage (NSM) and skeptical perspective. The third cluster of essays

considers the implications of cultural diversity for epistemology based on anthropological studies. These chapters explore real disparities in folk epistemology across cultures. Finally, the last two chapters discuss methods or perspectives to unify epistemology despite and based on the diversity of folk intuitions and epistemological concepts. Ethno-Epistemology is an essential resource for philosophers working in epistemology and comparative philosophy, as well as linguists and cultural anthropologists interested in the cultural-linguistic diversity of knowledge traditions.

The development of new polymeric materials has caused a considerable expansion in the field of reactive processing. These new materials are very competitive compared to the traditional ones with respect to production costs and performance. The reports published in this volume present the recent developments and emerging trends in the field of reactive processing and the physical properties of the resulting polymeric materials. Special attention is given to the chemical, kinetic and rheological aspects of reactive processing.
