Pale Blue Dot is a photograph of planet Earth taken on February 14, 1990, by the Voyager 1 space probe from a record distance of about 6 billion kilometers (3.7 billion miles, 40.5 AU), as part of that day's Family Portrait series of images of the Solar System.. In the photograph, Earth's apparent size is less than a

Life On Earth Dot Point Answers

The fossil record tells us that life on Earth has lasted at least 3.5 billion years (the Earth is about 4.54 billion years old), with the oldest physical traces of life dating back 3.7 billion years. And, if some kind of disaster doesn't intervene, our planet should continue to host life for at least another 1.75 billion

8 Things that make Life on Earth Possible - Our Planet  
A study of Earth's "solar neighborhood" finds over 1,000 solar systems have the perfect angle to view our planet. Study co-author Lisa Kaltenegger says their list focuses on main-sequence stars similar to the sun. These solar systems may contains exoplanets, Earth-like worlds sitting in the habitable zone for life.

...

Stare at the dot for any length of time and then try to convince yourself that God created the whole Universe for one of the 10 million or so species of life that inhabit that speck of dust. Now take it a step further: Imagine that everything was made just for a single shade of that species, or gender, or ethnic or religious subdivision.
