Lights, Camera, Action Potential "Lights, Camera, Action Potential" is an activity that simulates a nerve impulse traveling along the axon of a neuron. Each pair of students is given a small length of the axon, along with the sodium, potassium and chloride ions (beans and peas), charged ions and molecules (small pieces of construction paper), and gated channels (toothpicks are gates).

An Action Potential is the change in electrical potential associated with the passage of an impulse along the membrane of a muscle cell or nerve cell. ... Picture 1 shows the luminescence experienced by the "cultured neurons" during the lab)

Ninth grade Lesson Lights, Camera and Action Mechanisms of ...

Electrical charge (resting membrane potential) is the result of excess ions on one side of the cell membrane. FACT 4: One force acting on the ions is for them to move from areas of higher concentration to lower concentration. FACT 5: The facts above describe all cells, even plant cells. However, nerve cells are unique.
