The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacture's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.

Work smarter, not harder. The first guide to truly holistic health and fitness for those in their 40s From Tom Brady to Serena Williams, Tiger Woods and Roger Federer athletes are increasingly peaking later in their careers. Let Dr Marc Bubbs be your personal trainer in this accessible guide— aimed exclusively at those in their 40s. Create a customized program that works for YOU—from diet, to sleep, type of training and mindset, this book has all the tools you need. Peak 40 is for anyone wanting to rediscover the best version of themselves coming into their 40s. Author Dr Marc Bubbs is a performance nutritionist with a portfolio of professional and Olympic athletes - but he is also the dad of three girls, all under 7! Dr. Bubbs is here with you, in the eye of the mid-life storm, and he has created the ultimate book to help you through it. For fans of Joe Wicks and Michael Mosley, Dr. Bubbs offers simple, evidence-based and time-efficient strategies to help you reignite your energy and passion. His realistic, grown-up and non-judgemental approach is to explain the effect some food groups and lack of exercise and sleep have on our body. The information presented is easy to digest and he offers advice that can be tailored to your body and personality type. In his expert opinion, small changes such as 'not eating after 8pm for five out of seven days' can have a big impact on weight loss and positive mood. Rather than eliminating certain food groups like fats and carbohydrates, he looks at 'turning the dial' on them depending on individual needs. If life has become too sedentary, he provides ways to increase suppleness so that you can start to reintroduce movement into your life without causing pain. Guiding us through the myriad of confusion lifestyle messages, Dr. Bubbs teaches us: How to increase flexibility How to train with achy joints, knees, back, shoulders... Whether a plant-based diet is right How to maintain bone health Whether to lift weights Who should do HIIT (and who shouldn't) The importance of glucose control in your diet Advice on dealing with anxiety and low mood How to set realistic expectations "[Bubbs] dives into the nutrition and science—where it's been and where it's heading."—Zack Bitter, world record-holding ultra marathoner, as heard on "The Joe Rogan Experience" "Dr. Bubbs's advice on nutrition, health, and recovery for peak performance has been a game changer!"—Kevin Pangos, point guard, Barcelona FC Basketball

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

Completely revised and updated to reflect current advances in heat exchanger technology, Heat Exchanger Design Handbook, Second Edition includes enhanced figures and thermal effectiveness charts, tables, new chapter, and additional topics—all while keeping the qualities that made the first edition a centerpiece of information for practicing engineers, research, engineers, academicians, designers, and manufacturers involved in heat exchange between two or more fluids.

See What's New in the Second Edition: Updated information on pressure vessel codes, manufacturer's association standards A new chapter on heat exchanger installation, operation, and maintenance practices Classification chapter now includes coverage of scrapped surface-, graphite-, coil wound-, microscale-, and printed circuit heat exchangers Thorough revision of fabrication of shell and tube heat exchangers, heat transfer augmentation methods, fouling control concepts and inclusion of recent advances in PHEs New topics like EMbaffle®, Helixchanger®, and Twistedtube® heat exchanger, feedwater heater, steam surface condenser, rotary regenerators for HVAC applications, CAB brazing and cupro-braze radiators Without proper heat exchanger design, efficiency of cooling/heating system of plants and machineries, industrial processes and energy system can be compromised, and energy wasted. This thoroughly revised handbook offers comprehensive coverage of single-phase heat exchangers—selection, thermal design, mechanical design, corrosion and fouling, FIV, material selection and their fabrication issues, fabrication of heat exchangers, operation, and maintenance of heat exchangers—all in one volume.

Principles of Physics is a well-established popular textbook which has been completely revised and updated.

In Testosterone Inc.: Tales of CEOs Gone Wild, bestselling author and New York Post columnist Chris Byron chronicles the Gatsby-like saga of the rise and fall of the celebrity CEO. During the height of the 1990s bull market, they were America's new heroes: the heroes of business. They were our bold new leaders, cutting the fat, pushing for productivity, implementing visionary plans, and making strategic deals. When the bull market turned to bust and the applause turned to cat-calls, the world was shocked at the truth. Drenched in money and public acclaim, our CEO-heroes—mostly white, mostly male, mostly middle-aged—turned out to be not much different than a group of twenty-something rock stars—drunk on power and driven by sex, greed, and glamour. Testosterone Inc. goes behind the boardroom doors to show the serial affairs and marriages of these acquisitive corporate titans. At the center of this story is Jack Welch, the biggest of America's rock star CEOs and the former head of General Electric Co., surrounded by "mini-me" CEOs Ron Perelman of Revlon, Al Dunlap of Sunbeam, and Dennis Kozlowski of Tyco—all gone wild in public displays of consumption and predatory appetites writ large. Byron gets inside the bars where Welch liked to hang out and pick up women with his early "business soul mate" buddies. Byron hovers unseen at the elbow of Ron Perelman and his mistress aboard the Concorde for a week in Paris in his mistaken belief that his wife knows nothing about his secret affair. Byron peeks behind the curtains of a U.S. Army officers' quarters to behold Al Dunlap horrifying his first wife, who claimed in her divorce action that Dunlap would point his knife at her and say, "I often wondered what human flesh tasted like." Byron becomes a fly on the wall to chronicle the longing for respect and serial womanizing of Dennis Kozlowski. Frequently hilarious, sometimes heartbreaking, Testosterone Inc. follows the intertwined lives of these four corporate heroes, from childhood to their ultimate moments of glory and the crash-and-burn calamities that followed, as man's age-old hunger for power, greed, and temptation undid them all. From suicide to murder, from dysfunctional childhoods to dysfunctional marriages in adulthood, from business chutzpah to financial suicide, here is the ultimate untold business story of our time: what went on at century's end, when testosterone got the best of businessmen everywhere, and CEOs went wild.

For non-electrical engineering majors taking the introduction to electrical engineering course. Electrical Engineering: Concepts and Applications is the result of a multi-disciplinary effort at Michigan Technological University to create a new curriculum that is attractive, motivational, and relevant to students by creating many application-based problems; and provide the optimal level of both range and depth of coverage of EE topics in a curriculum package.
