Division E Problems

$E = 1$, since the sum of two 2-digit numbers is less than 200.

This means that the tens digits must add up to 10 (or 9 plus a carry from the ones column). There are 4 cases for the tens column: 6 and 5 plus a carry, because F and E cannot both

be 1; 6 and 4; 6 and 3 plus a carry; and 5 and 4 plus a carry.

the ten-thousands place with the least remaining unused digits. Since E repeats in the tens place, assign $E = 0$. Then assign 2, 3, and 4 to I, A, and U in some order. As a result, the next least available digits for T and R are 5 and 6, respectively. Therefore, the least possible sum is 512,024. 45
