The analysis and sorting of large numbers of cells with a fluorescence-activated cell sorter (FACS) was first achieved some 30 years ago. Since then, this technology has been rapidly developed and is used today in many laboratories. A Springer Lab Manual Review of the First Edition: "This is a most useful volume which will be a welcome addition for personal use and also for laboratories in a wide range of disciplines. Highly recommended." CYTOBIOS

The success of any spinal operation depends on good definition of the indications, consideration of the contraindications, technical and organizational factors, good operating technique and correct preoperative preparation and positioning of the patient. These points are presented in this book as clearly as possible and are illustrated with detailed high quality artwork.

Covering New York, American & regional stock exchanges & international companies.

In the past decade, the future of gynecologic also arisen. Mastery is imperative. One can not endoscopic surgery has been largely unpredict master these techniques by mimicking what able. Now it is obvious that time has changed other surgeons do, but must understand the gynecology in such a way to make many of the principles of the technological advances. Laser procedures that were commonly done obso physics and properties must be understood late. At no other time in the history of gyneco and, in addition, optics and television technol logic surgery has such an explosion occurred ogy are critical to performing excellent endo thus changing the face of this specialty to such a scopic surgery. great degree. But in addition to solving many Old timers are playing catch-up ball, but it is problems, the past decade has left us with the young that are the leaders and pioneers in many new and novel dilemmas. our field. It is for this reason that this text rep One of the ways in which our field has resents all that is important in endoscopic tremendously evolved is not only have some surgery. It not only is a comprehensive and en procedures become obsolete, but to some cyclopedic dissertation on the subject, but it is degree gynecologic surgeons have themselves written by the young leaders in the field. This is become obsolete.

This indispensable and concise guide covers both the basic science and clinical knowledge needed to diagnose and treat urologic diseases. Thoroughly revised and updated, the text focuses on the anatomy and embryology of the genitourinary system, physical and diagnostic examination, and specific disorders of the genitourinary system, including bacterial infections, STDs, neoplasms of the prostate gland, kidney disease, and renal failure. Features over 400 illustrations including CT scans, radionuclide imaging scans, and x-rays, and more.

This detailed volume for the first time explores techniques and protocols involving quantitative imaging flow cytometry (IFC), which has revolutionized our ability to analyze cells, cellular clusters, and populations in a remarkable fashion. Beginning with an introduction to technology, the book continues with sections addressing protocols for studies on the cell nucleus, nucleic acids, and FISH techniques using an IFC instrument, immune response analysis and drug screening, IFC protocols for apoptosis and cell death analysis, as well as morphological analysis and the identification of rare cells. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, Imaging Flow Cytometry: Methods and Protocols will be a critical source for all laboratories seeking to implement IFC in their research studies.

The second edition of the highly successful Surgical Approaches to the Spine will continue the tradition of presenting clearly enumerated and illustrated, step-by-step surgical procedures for the spine. New to this edition are chapters on the anterior approach to clivus C1 & C2, transclavicular cervico-thoracic approach, transsternal approach to the cervico-thoracic & upper thoracic spine, approaches to the sacrum & pelvis, and laparoscopic approaches.
