Munkres - Topology - Chapter 2

Solutions Section 13 Problem 13.1.

Let X be a topological space; let A be a subset of X . Suppose that for each $x \in A$ there is an open set U containing x such that $U \cap A$ is open in X . Show that A is open in X .
Solution: Let $\mathcal{C} \subseteq A$ the collection of open sets U where $x \in U \cap A$ for some $x \in A$.

Suppose $U \cap V = \emptyset$. Since X is a topological space ...

Munkres - Topology - Chapter 2
Solutions

Solution: Given $x, y \in X$ where $x < y$,
we have $x = x \cup \{x\}$ and $y = y \cup \{y\}$.

Since $[0; 1)$ is a linear continuum, if $x < y$

Online Library Munkres Topology Solutions

Chapter 4 Section 3
Let $x < y$, let $z = \frac{1}{2}(x + y)$; if $x = y$, let $z = \frac{1}{2}(x + y)$. Hence if $z = \frac{1}{2}(x + y)$, then $x < z < y$. Now let U be a non-empty subset of $X = [0, 1)$ that is bounded above. Define $M = \{m \in X : m \text{ is an upper bound of } A\}$, which is the set of all upper bounds of A .
