The number of continuously measuring non-invasive automated sphygmomanometers has increased significantly in the last 10 years. This standard is intended to provide the necessary requirements for clinical investigation to ensure that the essential performance of these sphygmomanometers is at an adequate level, similar to those standards on intermittent automated non-invasive sphygmomanometer .

The standard ISO 81060-2 "Non-invasive sphygmomanometers – Part2: Clinical validation of the automated measurement type (ISO in preparation). All three standards are expected to become European harmonized standards in the near future. The ISO 81060-1 addresses requirements for the alternative non-automated sphygmomanometers. Because these requirements are identical for all possible manometers, they include requirements for accuracy of the cuff pressure measurement and for the
